NOTE: Tide forecasts include only the astronomical forecast. Storm surge and wind affects may create conditions very different than this forecast. Please check your local Weather Forecast Office for storm-related departures. Vertical Datum references a tidal datum (MLLW)...for more information see [Tides and Currents](#).

NOTE: Coastal flood impacts are dependent upon waves as well as tide level. High waves can result in flooding even if the tide level is below flood stage.

Forecasts for the Tide Station (Del Norte Co.) other at Crescent City Harbour are issued routinely year-round.
