[water.weather.gov/ahps/](https://water.weather.gov/ahps/)

NOTE: Coastal flood impacts are dependent upon waves as well as tide level. High waves can result in flooding even if the tide level is below flood stage.

NOTE: Tide forecasts include only the astronomical forecast. Storm surge and wind affects may create conditions very different than this forecast. Please check your local Weather Forecast Office for storm-related departures. Vertical Datum references a tidal datum (MLLW)...for more information see [Tides and Currents](#).

Forecasts for the Tide Station (Humboldt Co.) at NORTH SPIT are issued routinely year-round.
