Observations courtesy of [US Geological Survey](https://www.usgs.gov/) .

NOTE: In December 2023, the USGS relocated the gauge from the San Juan Hollister Road Bridge to a new location approximately 3 miles upstream at the Hospital Road Bridge. Flows above 1,000 cfs and stages above 13.0 feet are unreliable due to rating curve uncertainty. As the USGS continues to take additional measurements, the flow and stage estimates will become more reliable above these thresholds.

Forecasts for the San Benito River at below Hospital Rd Bridge near Hollister are issued routinely year-round.
