Observations courtesy of [US Geological Survey](https://www.usgs.gov/) .

**NOTE:** Please refer to our [Coastal Hazard Message](#) for specific information regarding Coastal Flood Watches, Warnings and Advisories. Flood impacts are based on long-term averages. Actual impacts from any tidal flooding event may vary due to factors such as rainfall, wave action, and the number of tide cycles during which there is an onshore flow. During tropical cyclones, please refer [here](#) for additional storm surge information.

**NOTE:** During a Tropical Storm or Hurricane Watch or Warning, inundation mapping provided by the [National Hurricane Center](#) reflects a reasonable worst case scenario. The experimental forecast above is the total water forecast that is expected to occur.

Forecasts for the Maurice River at Bivalve (IN MLLW) are issued routinely year-round.
