Observations courtesy of [US Geological Survey](#).

NOTE: Coastal flood impacts are dependent upon waves as well as tide level. High waves can result in flooding even if the tide level is below flood stage. Please refer to [Coastal Flood Advisories and Warnings](#) for official water level forecasts during periods of coastal flooding. During tropical cyclones, please refer [here](#) for additional storm surge information.

Graphical forecasts are not available for the Gulf of Mexico Tide Gauge above Aransas Pass. **During times of high water, forecast crest information can be found in the [text products](#).**
